

Dual ARB Air Coupler / Single Rocker Switch Add-On Kit - Installation Instructions

Tools required for installation:
4mm Allen Wrench, 10mm Socket, Pliers if needed, Teflon Tape

Back View:

There are two Hex Cap Screws and washers to bolt the plate into the open holes in the base of the ARB Twin compressor (red circles). Use the other two 6mm Button Socket Cap Screws, washers and lock nuts to bolt the air coupler / rocker switch plate (blue circles). You will need a 10mm wrench and 4mm allen wrench for all of these screws/bolts/nuts.

Front View:

You can see the front side of the Button Socket Cap Screws holding the air coupler / rocker switch plate (blue circles). For maximum air line clearance, adjust the air outlet on the compressor so that it sits to the side vs coming straight out of the compressor. Your ARB Twin instructions show how to do this. Install the splitter into the compressor. Install the 90 degree elbow fittings as shown to run both air lines to the air couplers (green circle).
